TensorFlow	TensorFlow is a comprehensive platform for machine learning and deep learning research and production. It provides a wide range of tools, libraries, and community resources to help you build and deploy your own AI models.	2023-01-30 12:00:00 UTC	TensorFlow														
PyTorch	PyTorch is a Python-based scientific computing library with direct support for automatic differentiation, which makes it especially popular for deep learning applications. It's designed to be a fast alternative to TensorFlow.	2023-01-28 10:00:00 UTC	PyTorch														
TensorRT	TensorRT is a performance-optimized deep learning inference engine developed by NVIDIA. It accelerates Tensorflow, PyTorch, and other frameworks to run faster on NVIDIA hardware.	2023-01-25 14:00:00 UTC	TensorRT														
TensorFlow.js	TensorFlow.js is an open-source library for running TensorFlow models in web browsers. It provides a JavaScript API for interacting with TensorFlow models and data.	2023-01-22 09:00:00 UTC	TensorFlow.js														
TensorFlow Lite	TensorFlow Lite is a mobile and embedded ML framework developed by Google. It allows you to run TensorFlow models on mobile devices and other low-power platforms.	2023-01-18 13:00:00 UTC	TensorFlow Lite														
TensorFlow Model Server	TensorFlow Model Server is a high-performance inference server developed by TensorFlow. It provides a simple interface for deploying and serving TensorFlow models in production environments.	2023-01-15 11:00:00 UTC	TensorFlow Model Server														
TensorFlow Serving	TensorFlow Serving is a flexible, high-performance inference service developed by TensorFlow. It provides a simple interface for deploying and serving TensorFlow models in production environments.	2023-01-12 08:00:00 UTC	TensorFlow Serving														
TensorFlow Python API	The TensorFlow Python API is a high-level API for building and training machine learning models. It provides a simple interface for defining and training neural networks using Python code.	2023-01-09 07:00:00 UTC	TensorFlow Python API														
TensorFlow C++ API	The TensorFlow C++ API is a low-level API for building and training machine learning models. It provides a powerful interface for defining and training neural networks using C++ code.	2023-01-06 06:00:00 UTC	TensorFlow C++ API														
TensorFlow Java API	The TensorFlow Java API is a high-level API for building and training machine learning models. It provides a simple interface for defining and training neural networks using Java code.	2023-01-03 05:00:00 UTC	TensorFlow Java API														
TensorFlow Go API	The TensorFlow Go API is a high-level API for building and training machine learning models. It provides a simple interface for defining and training neural networks using Go code.	2023-01-01 04:00:00 UTC	TensorFlow Go API														
TensorFlow .NET API	The TensorFlow .NET API is a high-level API for building and training machine learning models. It provides a simple interface for defining and training neural networks using .NET code.	2023-01-01 03:00:00 UTC	TensorFlow .NET API														
TensorFlow JavaScript API	The TensorFlow JavaScript API is a high-level API for building and training machine learning models. It provides a simple interface for defining and training neural networks using JavaScript code.	2023-01-01 02:00:00 UTC	TensorFlow JavaScript API														
TensorFlow Python API	The TensorFlow Python API is a high-level API for building and training machine learning models. It provides a simple interface for defining and training neural networks using Python code.	2023-01-01 01:00:00 UTC	TensorFlow Python API														
TensorFlow C++ API	The TensorFlow C++ API is a low-level API for building and training machine learning models. It provides a powerful interface for defining and training neural networks using C++ code.	2023-01-01 00:00:00 UTC	TensorFlow C++ API														

Built on Jan 31, 2026

Developed with support from NIH Award [U54 OD036472](#)

## Notes

Repository For storing, tracking changes to, and collaborating on a piece of software.

PR "Pull request", a draft change (new feature, bug fix, etc.) to a repo.

Closed/Open Resolved/unresolved.

Issue/PR Avg Average time issues/pull requests stay open for before being closed.

Only the main/default branch is considered for metrics like # of commits.

# of dependencies is totaled from all manifests in repo, direct and transitive, e.g. package.json + package-lock.json.

## Analytics

Website metrics associated with this project.

### Notes

Active Users [Distinct users who visited the website ↗](#).

New Users [Users who visited the website for the first time ↗](#).

Engaged Sessions [Visits that had significant interaction ↗](#).

"Top" metrics are measured by number of engaged sessions.
