

## Core Project R03OD036491

### Overview

High-level info about this project.

#### Projects

1R03OD036491-01

#### Name

Delineating the functional impact of recurrent repeat expansions in ALS using integrative multiomic analysis

#### Award

\$324K

#### Publications

3 publications

#### Repositories

- repositories

#### Analytics

- properties

 Publications

Published works associated with this project.

| ID                                                                                                                                                                                                                      | Title                                                                                                | Authors                                                                    | R<br>C<br>R | SJ<br>R       | Cita<br>tion<br>s | Cit./<br>yea<br>r | Journal                                         | Publ<br>ishe<br>d | Upda<br>ted       |

### Notes

|              |                                                                             |
|--------------|-----------------------------------------------------------------------------|
| Repository   | For storing, tracking changes to, and collaborating on a piece of software. |
| PR           | "Pull request", a draft change (new feature, bug fix, etc.) to a repo.      |
| Closed/Open  | Resolved/unresolved.                                                        |
| Issue/PR Avg | Average time issues/pull requests stay open for before being closed.        |

Built on Mar 24, 2026

Developed with support from NIH Award [U54 OD036472](#)

# of dependencies is totaled from all manifests in repo, direct and transitive, e.g. `package.json` + `package-lock.json`.

## Analytics

Website metrics associated with this project.

Sorry, you're not authorized to view this data

### Notes

Active Users      [Distinct users who visited the website](#) .

New Users      [Users who visited the website for the first time](#) .

Engaged Sessions      [Visits that had significant interaction](#) .

"Top" metrics are measured by number of engaged sessions.
